Petroleum Registry of Alberta

Registry Tip

Changes to the Volume Variance Report

Release/Revision Date	Location of change in this document	Comment
January 16, 2004		Initial Release
January 22, 2004	Key Principles	Issue with requesting detail reports in CSV format only has been corrected.

Audience: All Stakeholders

Purpose: This tip informs clients of changes to the Registry's Volume Variance Report.

Background: In the past, the Volume Variance Report was only available in PDF format and at the detail level.

Key Principles: The Volume Variance Report is now available in both CSV and PDF format. Clients also have the option of selecting the report at the summary or detail level.

With these changes, clients are able to analyze SAF/OAF submissions to see that they have allocated volume/energy accurately among streams and owners.

Step One:

Select the summary of the report, which will provide:

1. The total volume/energy submitted by the client.
2. Volume/energy calculated by the Registry.
3. The difference (variance) between the two.

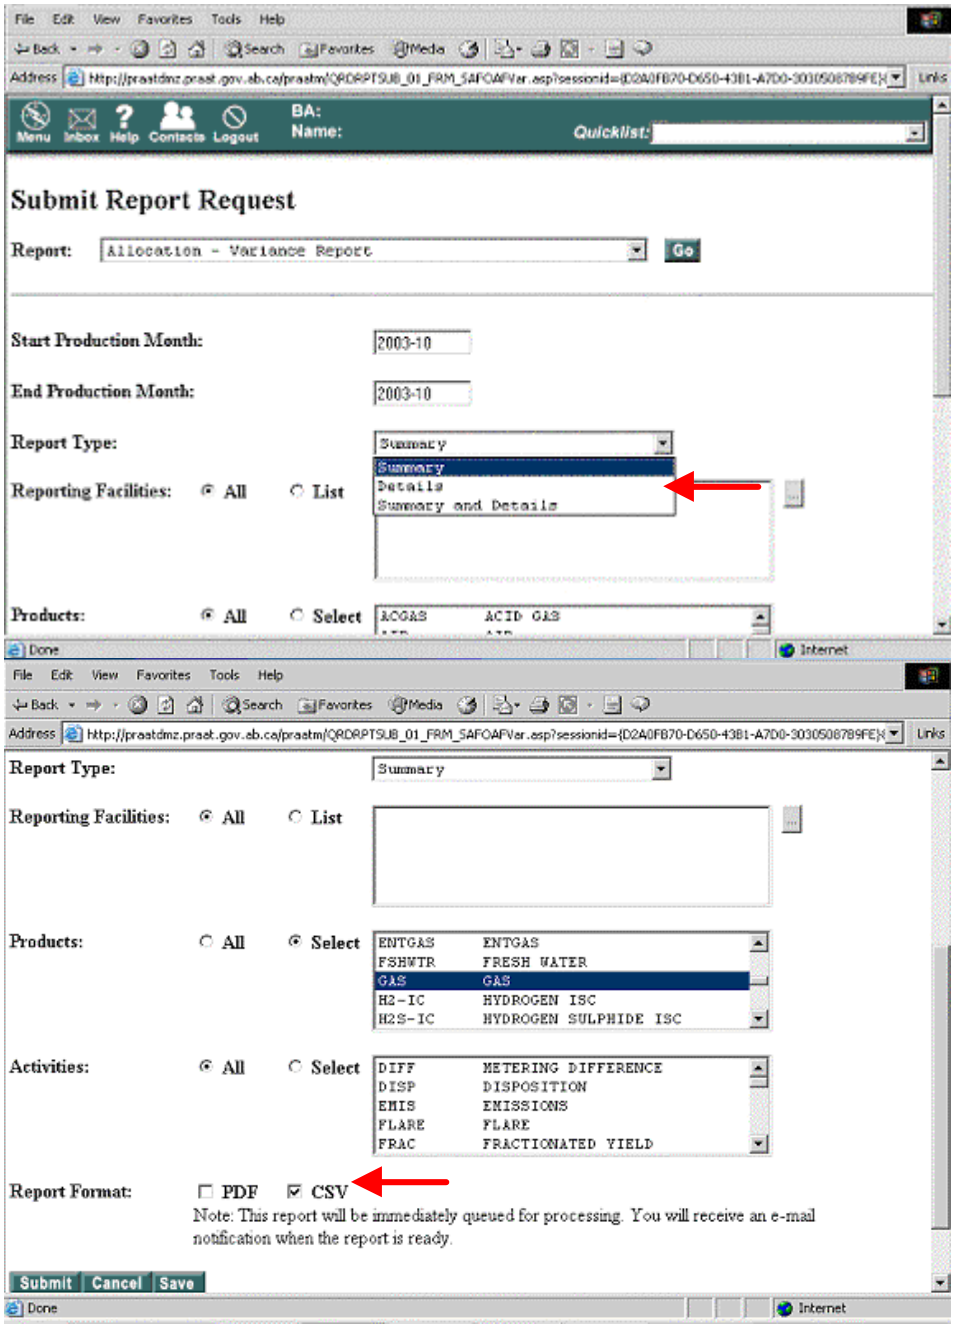
Step two:

See if the variance is within acceptable tolerance.

1. If yes, nothing else needs to be done.
2. If no, the detail level of the report will help clients identify where volume/energy variances need to be adjusted.

The screen print below shows the dropdown to select the report summary or details or both. NOTE: Users cannot select ALL

facilities, ALL Products, and ALL Activities --- at least one criteria must be filtered down.



More Information: Please contact the Registry Service Desk.
