

## Oil Sands Report

Jurisdiction	Release/Revision Date	Location of Change in this Document	Comment
AB	October 16/23	As part of a cleanup project for older/outdated tips, this tip combines various older/outdated tips.	These updates are not meant to change the intent of the original tip but to update to the current state and includes additional impacted jurisdictions.

**Purpose:** This tip outlines the purpose of the oil sands related report available in Petrinex.

This tip does not include the oil sands non-compliance report. Please see the tip titled "[Non-Compliance Reports](#)" that outlines the purpose of this report.

### **Key Principles:**

Oil sands (OS) operators within Petrinex have access to a report related to oil sand facility data to confirm what data has been submitted by themselves as the operator. The report listed below can be requested using the Petrinex submit report functionality at anytime by an authorized user, and the report will run during the day unless the request is too large which will move it to the overnight queue and be available the next morning. This report has a save report function and is available in three formats CSV, PDF, and XML.

Oil sands data is only available to the OS operator in Petrinex. The oil sands data is part of Petrinex's security blanket rules. See tip titled "[Access to Gross Volumetric Data \(Volumetric Security Blanket\)](#)" for further details.

### **1. Oil Sands Facility Activity Report**

The **Oil Sands Facility Activity** report is available in Alberta only and shows the oil sands data submitted to Petrinex. All oil sands data is available to the OS facility operator only.

This report is used by oil sands operators to confirm the volumes, products and received from/to facilities reported to Petrinex for their OS facilities aligns with the data in their internal systems.
