Registry Alert

Registry Enhancements: Inbox

Release/Revision Date	Location of change in this document	Comment
October 28, 2003		Initial Release

Audience: All Stakeholders

Purpose: This Alert informs stakeholders about the impact Registry enhancements will have on the operations of the Registry Inbox.

Background: This enhancement was brought forward and funded by industry.

Enhancements involving the Inbox have a scheduled release date of October 29, 2003

Key Principles: This enhancement will enhance stakeholders' navigation and sorting ability within the BA Inbox. It is also designed to enhance the user friendliness of the Inbox.
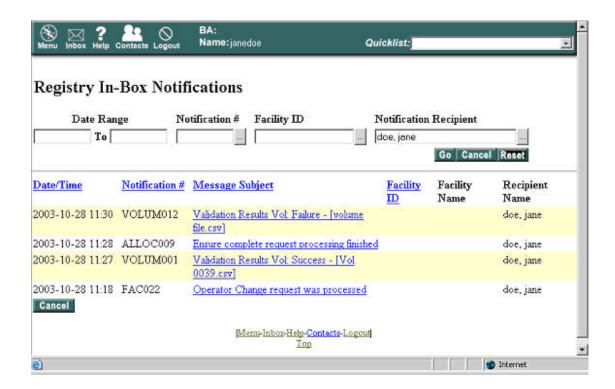

- o After viewing the details of a notification, the User will return to the same place in the Inbox where the notification is stored.
- o The Inbox will continue to default to the User's notifications.
- o The Inbox will provide the ability to type in or use a **User Lookup** for the name of the **Notification Recipient**.
- o Clicking **Go** will bring up the notifications with the recipient identified. Leaving the **Notification Recipient** box blank will retrieve notifications for all recipients.
- o Clicking **Reset** will cause the information to reset to the default condition. This will display all notifications for the User.
- o There are no changes to security. Users with **Mail Override** will be able to access the notification details.

See Draft print screen (below) that shows how the Registry Inbox will appear with the new functionality for filtering by **Notification Recipient**.

Registry In-Box Notifications

Date Range		Notification #	Facility ID	Notification Recipient
	To		...	...	doe, jane ...
