Petroleum Registry of Alberta

**Registry Alert**

Registry Enhancements: EUB Non-compliance Report

Release/Revision Date	Location of change in this document	Comment
January 09, 2004		Initial Release

Audience: All stakeholders

Purpose: This Alert outlines enhancements made to the Registry's Request for EUB Non-compliance Reports screen that will give stakeholders output selection options for these reports.

Backgrounder: This enhancement was brought forward and funded by industry.

Enhancements to the EUB Non-compliance Report screens are available as of January 10, 2004.

The EUB Non-compliance Report consists of two parts:

- The summary portion is available in both CSV and PDF formats*
- The details portion is only available in PDF format

If a client wants the details section of the report in CSV format, they must request a different report called the Volumetric Facility Activity Report for the facility(s) where errors have been identified.

(*The CSV version of the summary report is an Industry funded enhancement Industry that was implemented in June 2003.)

Before January 10, 2004, when the Non-compliance summary was requested, the client received both the CSV and PDF versions.

Note: This enhancement does not impact the automatically generated version of this report, clients will still receive the summary in both CSV and PDF formats.
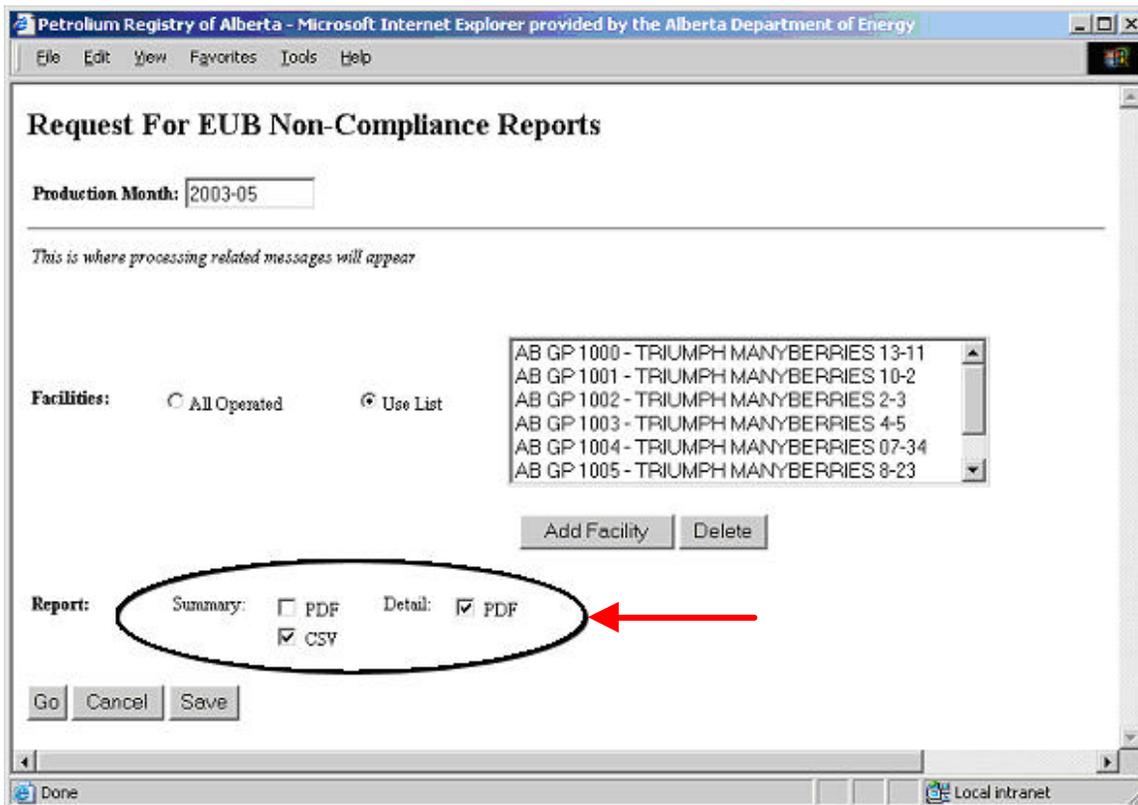

Key Principles: Clients now have a choice in selecting which version of the report (summary and/or detail) and in what format (summary in CSV and /or PDF) they would like provided to them by the Registry

See the following screen print to view enhancement changes.
