

## Waste Plant – New Well Completion Statuses and linking well completion IDs to Cavern Waste Facilities

Jurisdiction	Release/Revision Date	Location of Change in this Document	Comment
SK	April 4, 2019		Initial Release

**Audience:** All Saskatchewan Users

**Purpose:** To inform Industry that as of the March 2019 production month, ER has added new well completion (event) statuses to Petrinex and these well completions require a link to a Cavern Waste Facility (facility subtype 702).

**Background:** New well completion (event) statuses added to Petrinex effective March 2019 production month (201903) are WASTE ACTIVE CAVERN N/A and WASTE SUSPENDED CAVERN N/A and used for the well completion type of Waste Disposal (Cavern) only. When these well completions are set as Active or Suspended, a link to a Cavern Waste Facility (facility subtype 702) is required.

The well completions that have a well completion status of WASTE ACTIVE CAVERN N/A are not required to submit injection and recovered volumes from the cavern. The Cavern Waste Facility will still be required to submit volumetrics to show the volumes injected and recovered from the cavern as Receipts (REC) and Dispositions (DISP) from the Surface Waste Facility (facility subtype 701).

For the 2019-20 Administrative Levy, these wells will be billed as a Class 1 or Class 9 depending on well completion (event) status.
