

Availability of Volumetric Data For Non-Confidential Wells Linked to Experimental Facilities and Battery Subtypes 371/381

Jurisdiction	Release/Revision Date	Location of Change in this Document	Comment
AB	October 30, 2020		This non-confidential data is now also available in the online query screen
AB	July 16, 2019		Initial Release

Audience: AB Operators

Purpose: To notify Operators that effective July 15, 2019, Volumetric Data for non-confidential wells linked to Experimental facilities as well as Battery Subtypes 371/381 (Gas Testing/Drilling & Completing) has been available in the Petrinex Public Data Portal. [Effective November 5, 2020 this information will also be available in the Petrinex online Query Volumetric Submission screen.](#)

Background: All well Volumetric data for Experimental Facilities as well as Gas Testing, and Drilling & Completing Batteries (subtypes 371 & 381) that had both non-confidential and confidential wells linked to them was previously not available to non-operators nor the general public. Due to requests from Industry and in the interest of transparency, the AER has now made only the non-confidential well level Volumetric data for these facilities available in the Petrinex Public Data Portal, when Conventional Volumetric Data Downloads are requested. [Effective November 5, 2020 this information will also be available in the Petrinex online Query Volumetric Submission screen.](#)

Key Principles: Only the well level Volumetric data will be made available for the non-confidential wells linked to Gas Testing Batteries (subtype 371), Drilling & Completing Batteries (subtype 381), and Experimental facilities. Volumetric data for confidential wells linked to these facilities, along with the corresponding Battery/Facility level Volumetric information will continue to be unavailable to non-Operators and the general public.
