

New Facility Subtypes for VME0041

Jurisdiction	Release/Revision Date	Location of Change in this Document	Comment
SK	September 17, 2019	Update to Tip entitled "New SK Volumetric Reporting Error"	Initial Release

Audience: All Saskatchewan Users

Purpose: To inform Saskatchewan users that Ministry of Energy and Resources (ER) updated the list of facility subtypes triggering volumetric non-compliance error, VME0041. This was done to align with EPAP CAI 171: Missing Gas Volume for a crude oil/heavy oil well.

Background: The VME0041 error was introduced to Saskatchewan Users in May 2014 to address growing concerns with respect to accuracy of gas production measurement and reporting. Please refer to Tip: [New SK Volumetric Reporting Error](#).

A recent review of facilities triggering VME0041 error showed that the following facility subtypes 313 – Heavy Crude Oil Battery, 314 – Crude Oil Multi-Well Swab Group Battery, and 316 – Crude Oil Multi-Well Swab Group Paper Battery were not included on the list. There are no other changes to the error.

The addition of the above facility subtypes to volumetric error VME0041 ensures consistency with EPAP CAI 171.

These changes are effective on a go forward basis as of 2019-08 production month, and for prior period amendments.
