

SK Infrastructure – Facility Subtypes 908 and 520

Jurisdiction	Release/Revision Date	Location of Change in this Document	Comment
SK	June 6, 2023		Initial Release

Audience: All Saskatchewan Users

Purpose: To remind Industry that Saskatchewan Ministry of Energy and Resources made enhancements to Petrinex effective June 2, 2022, to create two new facility subtypes that will allow source water to be reported as produced and injected/disposed under rare circumstances.

In rare circumstances, there are scenarios that may occur and these new subtypes will accommodate the following reporting requirements.

- If a well needs a facility code to report source water production from a site that has no surface equipment, subtype 908 will accommodate this scenario.
- If a well needs a facility code to report injection/disposal of water volumes, subtype 520 will accommodate this scenario.
