

## Registry Tip

# Avoid timeouts when requesting SAF/OAF Ensure Complete Reports

Release/Revision Date	Location of change in this document	Comment
April 11, 2003		Initial Release

**Audience:** All stakeholders

**Purpose:** This alert outlines how users can avoid timeouts and/or rejection of their request for a SAF/OAF Ensure Complete report.

**Background:** A number of client SAF/OAF Ensure Complete report requests are being rejected because the request asks for too much information.

**Key Principles:** Currently, the default dates on the SAF/OAF Ensure Complete Report screen (see below) request too much information.

“**Beginning Production Month**”: is set for the first month of Registry operation (October 2002)

“**Ending Production Month**”: is set for the current production month.

The request for multiple months can lead to time-outs and/or a rejection of the SAF/OAF Ensure Complete Report request.

To avoid this, clients should indicate only one month per request.
