

Release of revised edition of AER *Manual 011: How to Submit Volumetric Data to the AER*

Jurisdiction	Release/Revision Date	Location of Change in this Document	Comment
AB	July 31, 2026		Initial Release

Audience: All Alberta stakeholders

Purpose:

To notify stakeholders that the Alberta Energy Regulator (AER) published a revised edition of *Manual 011: How to Submit Volumetric Data to the AER* (Manual 011) effective July 30, 2026.

Background:

Since the January 2025 release of Manual 011 several enhancements have been implemented within Petrinex, including updates related to Carbon Capture, Storage and Utilization (CCS/CCUS) reporting and NGL blending at batteries. Details on these changes are outlined in Section 1.2 “What’s New” of the revised manual.

Key Principles:

The updated Manual 011 has been revised to reflect current Petrinex functionality. In addition, the manual provides guidance on reporting “high-water-content hydraulic fracturing system flowback” received at Class II disposal wells, as required under *Directive 051: Injection and Disposal Wells – Well Classifications, Completions, Logging, and Testing Requirements*.

Stakeholders are encouraged to review the revised manual and familiarize themselves with the updated reporting guidance and functionality changes.

The revised *Manual 011* has been published on the AER website - www.aer.ca
