Registry Alert

New “Report” Button Added to Query Volumetric Screens

Release/Revision Date	Location of Change in this Document	Comment
May 04, 2006		Initial Release
April 5, 2007	Key Principles	Addition of CSV version

Audience: All Stakeholders

Purpose: This Alert informs users of a new button added to the Query Volumetric screens that allows them to request a daytime running of the Volumetric Facility Activity Report for a single facility.

Background: In the past, Volumetric Facility Activity Reports were only processed overnight, regardless of the requested report parameters. After this change, for single facilities spanning one production month, this request will now be processed during the day.

Key Principles: As of May 4, 2006, when in the query volumetric screen, a daytime running report can be requested for a single facility by clicking on the new “Report” button.

The new button is available on the following query volumetric screens:

- Summary View
- Facility Activity View
- Well View
- Pro-ration Factor View

As of April 5, 2007 when you click on the “Report” button the output will be a PDF and CSV version of the report which will contain all data for that facility, production month and amendment number.

Petroleum Registry of Alberta

When requested, a user will see a successful submission message with a file key number and a message advising that the report will immediately queue for processing. Users will receive an e-mail notification when the report is available to view in their Registry in-box.

NOTE: The daytime report will contain data for a single facility for a single production month. If a user requires more information than that, they can still request an overnight report.
